

Mathematics, English and French Curriculum

Our mathematic, English and French curriculum is separate from the International Primary Curriculum. The curriculum outline for these subjects are standard based, the curriculum ensures that appropriate connections are made between the sections. Where applicable cross-curricular links are used to ensure and create positive experiences that help different kinds of children towards the knowledge, skills and understanding goals. The mathematic and English curriculum is derived from the combination of the National Numeracy and National Literacy strategies in the UK and the Ontario Curriculum, two leading curriculums in the field of education.
